## PROFILE

QA Engineer with hands-on experience in API testing, mobile application testing, and test documentation development. Proficient in test design techniques, bug tracking, and automation with Postman. Skilled in Agile methodologies and capable of working in a fast-paced development environment. Strong analytical skills and attention to detail, with a passion for quality assurance and continuous learning.

## PROJECTS

### API Testing of CRM System("Megaplan")

A team-based academic project focused on testing the API of an online radio store within the "Megaplan" CRM system.

Responsibilities:

- Analyzed API documentation to define key test scenarios
- Created and managed a structured Postman collection for API testing
- Developed automated API tests using Postman Test Scripts
- Conducted manual API testing, verifying request/response accuracy and data validation
- Used Charles Proxy to intercept and analyze HTTP requests in a mobile environment
- Reported and documented bugs using Asana
